

## Contingency Requirements

Product Engineering is proud to participate in contingency programs with various sanctioning bodies. Due to some confusion we have established these requirements.

- Competitor must have a Product Engineering, combo fuel pump and/or fuel pressure regulator with return installed in the race vehicle.
- The fuel pump and/or fuel pressure regulator must be functional. Fuel pumps and/or fuel pressure regulators manufactured by Product Engineering under private label agreements with other companies are not eligible.
- The competitor must have (2) current unaltered Product Engineering decals affixed to the race vehicle (1 per side) for the entire event.
- Competitor must supply a digital "winners circle" picture to Product Engineering.
- Competitor must supply digital picture of product installed in the race vehicle.
- Competitor must be registered in the contingency program prior to the event for which contingency is being claimed. Competitor only needs to register once per year.
- Competitor must supply proof of purchase.
- Contingency pay out is reserved for retail customers. Products can be purchased directly from Product Engineering or through one of our dealers. Fuel pumps and/or Fuel pressure regulators that were received through a discount program, award, or as part of a sponsorship package are not eligible.
- Contingency will only be paid after official notification by the racing sanction body is received by Product Engineering.
- Release forms for the product and advertising must be supplied to Product Engineering from the Owner and/or Driver. Must agree to use of car/driver in advertising.
- Certificates cannot be redeemed for cash. Certificates must be used within 12 months of date of award.
- Competitor must also comply with all the requirements of the sanctioning bodies in which they compete.
- Some requirements will vary by sanctioning body.
